Appendix V: Project Completion List Sorted by HSAs.....	47

## DETERMINATION OF NEED PERFORMANCE REVIEW (FY1986)

Determination of Need Program (DoN) was established in 1972 as a planning and regulatory division. Its mandate is to review substantial capital expenditures by health care facilities and to respond to major changes in the services. The Program's main objectives include: 1) reduction of overall health care costs by preventing duplication of services; 2) promotion of high priority health care needs of the public; 3) promotion of equitable geographic and socioeconomic access to health care; 4) encouragement of public participation in the review of proposals; 5) improvement of internal hospital planning; 6) advancement of standards of quality health care.

Fiscal year 1986 marked significant achievements with respect to the above goals. During this year, the Program achieved record savings in health care expenditures, significantly reduced the backlog of applications, improved staff productivity, developed and updated numerous guidelines, and implemented innovative methods of processing applications.

### Approval Rate

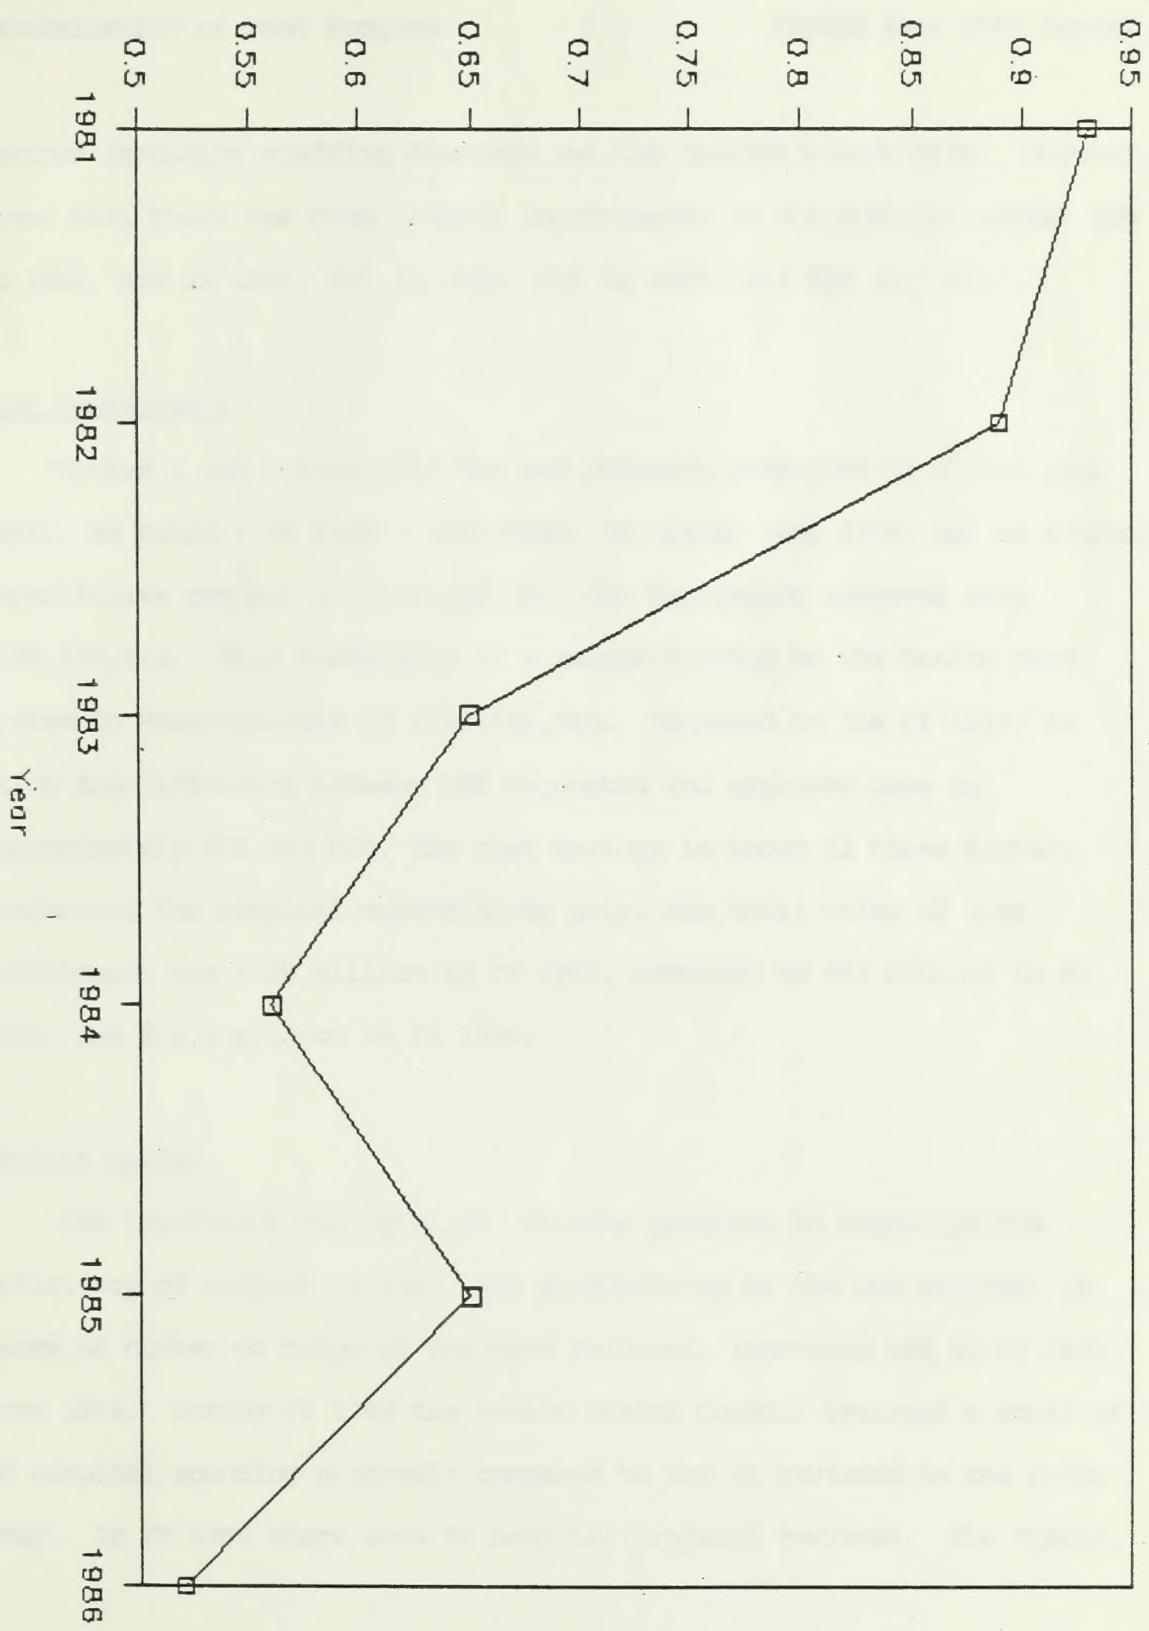

The approval rate refers to the ratio of total maximum capital expenditures requested compared to the amount approved. Although this ratio cannot be treated as a single measure of performance, it is a significant indicator of health care expenditures regulation. Figure 1 on page 2 shows the percentage approval rate between 1981-1986. In 1981, the approval rate in the DoN Program exceeded 93 percent of all proposed expenditures. This unusually high approval rate was due to a number of

DON APPROVAL RATE 1981 - 1986  
(Percent)

Percent MCE Approved

- 2 -

factors including staffing shortage and the Program budget cuts. However, since 1981 there has been drastic improvements in the approval rates: 89% in 1982, 65% in 1983, 56% in 1984, 65% in 1985, and 52% in 1986.

#### Cost Containment

Tables 1 and 2 summarize the DoN projects completed in fiscal year 1986. As table 1 on page 4 indicates, in fiscal year 1986, out of a total expenditures request of \$496,583,353, the Department approved only \$256,279,818. This translates to a record savings to the health care system in Massachusetts of \$240,303,535. Compared to the FY 1982, in which the difference between MCE requested and approved came to approximately \$22,400,000, the cost savings is about 11 times higher. Concerning the hospital expenditures only, the total value of cost containment was \$138 million in FY 1986, compared to \$27 million in FY 1985, and \$11.8 million in FY 1984.

#### Project Review

The Department has continued to make progress in improving the efficiency of project review. The productivity of the DoN Program, in terms of number of hospital projects reviewed, increased 46% in FY 1985 from 1984. During FY 1985 the Public Health Council reviewed a total of 60 hospital spending proposals compared to the 41 reviewed in the prior year. In FY 1986 there were 86 hospital projects reviewed. The Public

Table 2

## DON HOSPITAL PROJECTS COMPLETED IN THE FISCAL YEAR 1986

Service Type	Number of Projects	MCE Requested	MCE Approved	Cost Containment	Approval Rate
1A	36	\$192,815,069	\$45,389,935	\$147,425,134	24%

Abbreviations:

NH/AD = Nursing Home/Adult Care  
DR = Delegated Review Process  
PH = Public Health Council Actions  
WDR = Projects Withdrawn  
REF = Refused Acceptance

Health Council reviewed a total of 60 projects, 12 projects were acted upon by administrative review process, 13 projects were withdrawn, and 1 application was refused.

One of the major accomplishments of the DoN Program during the last two fiscal years has been the reduction of the backlog of applications. In discussing the backlog applications, the following two issues must be addressed: First, the existing and past trend associated with the filing of DoN applications; Second, the potential capability of the program to process and review the pending applications. The evidence from the past and present analysis of the DoN statistics points to the fact that the growth in the number of DoN applications significantly outweighs the Program's capability to review and process them in a timely manner. However, the Program's performance in reviewing and processing of the backlog applications has been improved over the years. For example, at the begining of 1985, there were 227 applications pending, of which 122 were backlogged. As of July 8, 1986, however, there were 196 applications pending, of which 105 were backlogged. However, unless the Program's resources grow in proportion to the number of applications submitted, the prospects for any improvements in this area are gloomy. This is compounded with the fact that during the fiscal year 1986, the Program received 175 applications with \$785,608,377 Maximum Capital Expenditures requested, the highest annual filing ever since the inception of the DoN.

Regional Distribution of Health Care Expenditures:

One of the main objectives of the DoN Program is to encourage

regionalization of health care services to ensure provision of the most appropriate level of care in the least costly way. Table 2 (page 8) shows the regional distribution of health care expenditures in the FY 1986. The first column contains the Health System Agencies (HSAs), associated with different regions in Massachusetts. Map 1 on page 9 shows the division of different regions representing the HSA domains in the State. Also graphs 2 and 3 on page 10 depict the share of each HSA in terms of the amount of Maximum Capital Expenditures (MCE) requested and approved. From a total of 163 applications with \$496.6 million in MCE requested, 69 (42.3%) applications with the MCE of \$315.4 million (60%), were filed in the HSA4. Similarly, from \$256,279,818 in total approved expenditures, \$151,560,851 (60%) belonged to HSA4 regions. The Department has attempted to reduce the capital expenditures in regions with highest concentration of health facilities. This is evidenced by relatively low overall approval rate of 52%. Nevertheless, as table 3 indicates, HSA1 with \$9,988,789 average capital expenditures requested, has a lower approval rate (41%) than HSA4 with \$4,638,637 in requested capital expenditures. The distribution of health care expenditures is more even in other regions of the State.

#### Development of Guidelines

In addition to the review of projects, a significant amount of staff time has been involved in the development of guidelines which expedite project review and streamline the process. Completed, up-to-date

Table 3

Regional Distribution of Health Care Expenditures In The Fiscal Year 1986

Number of Projects	MCE Requested	MCE Approved	Average MCE Requested	Average MCE Approved	Containment	Approval Rate
HSA1	25	\$24,363,608	\$9,988,789	\$974,544	\$399,552	\$7,240,759 41%
HSA2	18	\$31,782,856	\$13,783,446	\$1,765,714	\$765,747	\$17,999,410 43%
HSA3	11	\$5,684,972	\$4,425,616	\$516,816	\$402,329	\$1,259,356 78%

### REGIONAL DISTRIBUTION MCE APPROVED

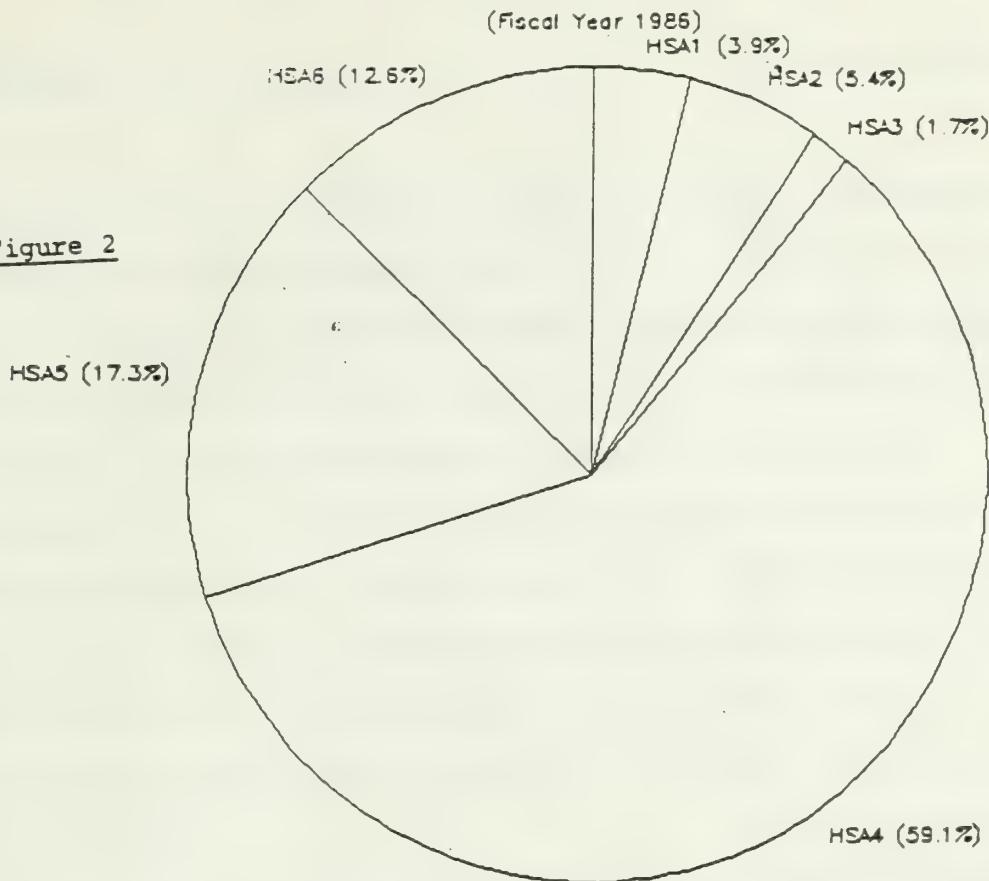

Figure 2

### REGIONAL DISTRIBUTION MCE REQUESTED

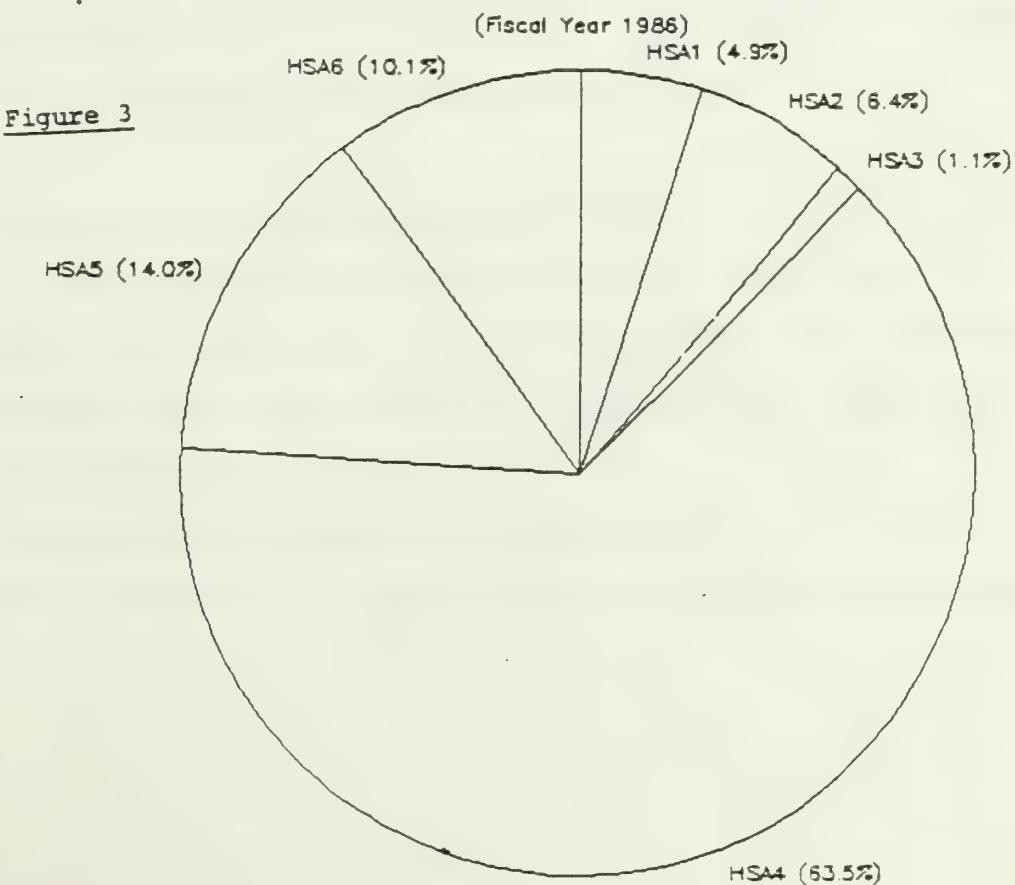

Figure 3

guidelines allow applicants and reviewers to begin with a common set of assumptions about the important issues for review, especially assumptions related to the need for proposed projects. Explicitly guidelines tend to discourage frivolous or marginal applications which cannot make a strong case based on the need requirements outlined in the guidelines. Guidelines result in information requirements which are more explicit, so that less time is spent requesting and receiving additional information from applicants. Finally, guidelines are an additional means to ensure that the DoN Staff review applications on a consistent basis.

In the past year, Staff has completed guidelines in the following functional areas:

End Stage Renal Disease - Guidelines were updated to project the increased numbers of patients referred for kidney dialysis and the increased need for more dialysis facilities. The guidelines also discuss developments in home dialysis and set goals till the year 1990.

Update of Long Term Care Standards - The long term care guidelines have been updated to include new requirements for nursing home applications in Massachusetts. The updated guidelines clarify the special population category, equity contribution, medical census requirement and the capital expenditure requirements.

Continuing Care Retirement Communities Guidelines - Staff was involved in developing the first long term care guidelines for continuing

care retirement communities (CCRCs) in Massachusetts. CCRCs represent an alternative health care delivery system for the elderly in which an entire continuum of care is available at one site, including housing, medical services, and nursing care. These guidelines recognize these facilities and set standards for the nursing home components of these organizations.

Development of Alzheimer Disease Guidelines - The completed guideline sets up the criteria for nursing care for Alzheimer Disease.

Magnetic Resonance Imaging - Magnetic Resonance Imaging (MRI) guidelines were updated to reflect the need for more MRI units than had originally been anticipated. The revised guidelines outline the goals for the development of new units in the coming year, as well as outline criteria for the quality control and costs of the proposed facilities.

Cardiac Catheterization Laboratories and Intensive Care Units - The Department completed a guideline which sets policies regarding the growth of cardiac catheterization laboratories and the size of intensive care units in hospitals.

Radiation Therapy - Guidelines determining the need for radiation therapy units, first developed in 1982, were updated and revised to respond to the need for these services and to determine the most cost-efficient means of meeting this need.

Psychiatric Guidelines - Staff has been involved in developing guidelines to ensure the development of appropriate placement settings for children and adolescents needing inpatient psychiatric care, in response to Governor Dukakis' Executive Order outlining his concerns with this

issue. In addition, the Department is currently refining the bed need formula for child, adolescent and adult psychiatric inpatient services.

Equity Contribution - Guidelines have been proposed which develop a uniform policy with regard to the equity contribution which may be required of applicants. An equity contribution is the percentage of the approved capital expenditure which the health care facility pays for with existing internal funds, rather than borrowing from external sources. The proposed guidelines base the required equity contribution in part on dollar amount of the project.

Space Guidelines - Guidelines which outline acceptable ranges of size for functional areas in hospitals, clinics, and other health care settings were completed. These guidelines, based on industry standards and previously approved DoN projects, will be especially important in facilitating the review of large hospital construction projects.

Budget Guidelines - The current DoN regulations (105 CMR 100.451), provides that the Department adopt an amount for the total annual increase in incremental hospital operating costs for acute hospitals due to DoN applications, exemptions, and increases to previously approved capital expenditure limits. In the past fiscal year, a computerized budget accounting system was developed which accounts for the allocated budget, total proposed expenditures, proposed expenditures acted upon, approved expenditures, budget remaining, project remaining, and surplus/deficit for the following categories: Capacity Expansion, Innovative/specialty Technology, Renovation, Equipment Replacement, and Transfer of Ownership.

This accounting system is particularly useful for the members of the Public Health Council in monitoring the annual incremental operating costs of the health care system in Massachusetts.

Office Automation

In an earlier memorandum submitted by the Assistant Commissioner, the acute problem of the lack of computer resource capability was addressed as follows:

Presently, the Program has one IBM PC and one word processor. Most formulae and comparative and reference data is kept manually. Analysts are forced to calculate and recalculate data with standard calculators which is time consuming and wasteful....(Divver, August 6, 1985, p. 3).

In fiscal year 1986, the Department installed micro-computer systems in order to upgrade the data processing capability of the office and also increase staff efficiency. At the present time, the DoN program has a modern Management Information System (M.I.S.) with strong capability in virtually all of the functional M.I.S. areas (e.g., database management, spreadsheet analysis, word processing, etc.). The training of staff and transition to the new computerized environment required a significant dedication of time and resources. Nevertheless, the efforts will bear fruit in the form of higher efficiency and reduced application review time.
